SUMMARY

Software Engineer with 2+ years of experience building and shipping production web, mobile, and backend systems. Full-stack across React, Next.js, React Native, TypeScript, Node.js, and MongoDB, with hands-on ownership of API architecture, realtime features, payments, AI-powered product functionality, and production releases. Experienced in taking product work from technical design through implementation and deployment, with progression into technical leadership.

TECHNICAL SKILLS

CORE ENGINEERING

TypeScript, JavaScript, React, Next.js, React Native, React Context, Tailwind CSS

DATA & REALTIME

MongoDB, Redis, WebSockets, Socket.io, WebRTC

CLOUD & TOOLS

AWS (EC2, S3), Firebase, Vercel, Docker, Git, GitHub, Postman

BACKEND & APIs

Node.js, Express.js, REST APIs, GraphQL

AI & PRODUCT INTEGRATIONS

OpenAI, AI-Augmented Engineering, Payments, Deep Linking, Production Releases

EXPERIENCE

Hexadecimal Software Pvt. Ltd.

Software Developer (Promoted to Team Lead)

Noida, India

Sept 2023 – Jul 2025

PRODUCT ENGINEERING

- Owned end-to-end delivery across the company's React web application, React Native mobile application, and Node.js backend, taking product features from technical design through implementation, release, and production support.
- Redesigned the React Native application architecture, including navigation, root component hierarchy, and code-splitting strategy, improving maintainability and establishing a stronger foundation for evolving product requirements.
- Designed backend REST APIs and reusable service layers for authentication, property management, search, AI-powered content generation, and dynamic form workflows.
- Engineered a cross-platform URL parsing and deep-linking framework that routed shared property URLs directly to the relevant screens across web and mobile applications.
- Delivered business-critical features including save-and-resume multi-step forms, Razorpay payments, OpenAI-powered property description generation, onboarding workflows, and realtime functionality.
- Owned production releases, hotfixes, Android/iOS builds, and Google Play Store and Apple App Store deployments, while investigating and resolving issues across web, mobile, and backend systems.

SELECTED PRODUCT WORK

Enterprise Real Estate SaaS

- Contributed across the web, mobile, admin, and backend ecosystem of an enterprise real-estate SaaS product supporting property listings, subscriptions, analytics, onboarding, and realtime workflows.
- Built product functionality across frontend, mobile, and backend systems, contributing to property management, search, onboarding, subscription, and user workflows.

Gatsby Blog Platform

- Built a Gatsby-based publishing platform from scratch, including a custom Markdown editor, autosave, and Git-based publishing workflow.
- Optimized static site generation, SEO, caching, deployment automation, and build performance, contributing approximately 70% of the company's website traffic.

LEADERSHIP & RECOGNITION

- Mentored interns, conducted code reviews, and helped maintain technical continuity through multiple engineering team transitions.

Recognition: Employee of the Month within 3 months; promoted to Team Lead within 8 months.

Independent Product Engineering Project

Backend / Product Engineering — Fantasy Sports Platform

One-time project

- Designed a provider-agnostic backend architecture that normalized external sports data into platform-specific match, player, and event models using Node.js, Express, and MongoDB.
- Built automated sports-data processing pipelines using scheduled jobs for daily data synchronization, upcoming-match preparation, live-match detection, and downstream scoring workflows.
- Engineered fantasy scoring and contest logic that transformed incoming match events into player points, leaderboard rankings, contest state transitions, prize distribution, and refunds.
- Built contest lifecycle and settlement workflows covering team validation, match locking, dynamic contest creation, ranking and tie handling, prize allocation, and wallet transactions.
- Implemented PayPal-powered wallet and transaction flows covering deposits, contest entries, winnings, and refunds.
- Led technical delivery for approximately two months of the three-month engagement, owning backend architecture and core product systems.

SELECTED PROJECTS

Nakama Authoritative Tic-Tac-Toe

Personal Project

- Built a server-authoritative multiplayer game where the backend owns match state, validates gameplay, handles match-making, and synchronizes authoritative state with connected players.
- Implemented reconnect recovery, timed turns, leaderboard progression, persistent match history, and isolated concurrent match state using Nakama authoritative matches.

Next.js, React, TypeScript, Nakama, WebSockets, Docker, Railway, Vercel

[GitHub](#) | [Live](#)

iSee — Realtime Video Communication

Personal Project

- Built a peer-to-peer video communication platform with realtime video calling, messaging, room-based communication, and WebRTC signaling and media flow.

React, Node.js, WebRTC, Socket.io, MongoDB

[Live](#)

Veyra — Biotech Landing Page

Frontend Project

- Built an animation-driven, responsive landing page with accessible navigation, reduced-motion support, and reusable React components.
- Implemented scroll choreography and interaction behavior with Framer Motion and GSAP while keeping high-frequency interactions performant and minimizing unnecessary client-side state.

Next.js, React, TypeScript, Tailwind CSS, Framer Motion, GSAP

EDUCATION

Manipal University Jaipur

2025 – Present

Bachelor of Computer Applications (Online)

The Pharmaceutical College, Barpali

2019 – 2022

Diploma in Pharmacy
